1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-9 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over EP 1,149,574 to Kaneda et al. Kaneda et al discloses a cleansing material comprising from 10-80% by weight water, (see paragraph 0018), 0.5-10 by weight surfactant, (see paragraph 0019), which is impregnated onto a water insoluble substrate such as a non-woven fabric, (see paragraph 0025). Kaneda teaches that the viscosity is 200-4000 mPa.s at 25 C, which would correspond to 4000 cp which is within the claimed range. The material would necessarily be damp. Kaneda does not teach that the viscosity is measured on a Haake CV 20 Rheometer with 30 mm profiled parallel plates at 23 C, but it is reasonable to presume that the viscosity of the Kaneda composition would fall within the claimed range if measured as set forth in the claim. Support for this presumption is found in the fact that the viscosity has been measured at and falls within the claimed range, and because Kaneda teaches employing the water and surfactant components in amounts which are within the claimed range.
